At BYU, I direct a research experiences for undergraduates (REU) site that is funded by the National Science Foundation (NSF). The purpose of this site to provide chemistry, biochemistry, molecular biology, and related science majors with fundamental research experiences for 10 weeks during the summer. This research experience enables two-year college students to continue research after transferring to a four-year college, and attend graduate school. My Q&A interactive style talk will give an overview of research and the REU program. For example, requirements, stipend, housing, research groups, workshops, and activities.

Please see the BYU REU webpage and apply! <https://reu.chem.byu.edu/>
