

Spring Semester 2014

Welcome to Math 0950!

This is a very exciting time to be in developmental mathematics at Snow College. For Spring Semester 2014, we be using *iLearnMath* online software to provide you with a more personalized math experience which will allow you to successfully master the math content at your own pace. This revolutionary online interface provides you with the flexibility of being able to access online content and lessons anytime and anywhere. In addition, you will be able to quickly jump past content that you already understand so that your valuable study time will be focused on the content that you have not yet mastered. For the ambitious student, you will also be able to advance through content more quickly with the possibility of finishing multiple courses in a single semester!

All Math 0950 sections, with the exception of section 005 taught by Instructor Lorie Hughes, will be using this new *iLearnMath* interface. If you are getting this letter, you are signed up for a section that will use the new program. (If you would prefer to take the more traditional route, please change your class schedule accordingly.)

In previous surveys with our students, we have learned that 75% to 90% of students have their own Laptops. If you are one of those students, please make sure to bring your laptop to class with you daily. For those students that do not have a laptop, laptops will be provided for you to use during class time. In addition to a computer, *you will need to bring a set of headphones with you daily.*

We are excited to have you in developmental math and will provide additional information about how to gain access to the new program on the first couple days of class. We would also like you to know that you will **NOT** need to purchase a textbook from the bookstore.

Please let us know if we can assist you further. Have a fabulous Spring Semester at Snow College!

Sincerely,

Cindy Alder
Snow College Mathematics Department
