DON'T GET LOCKED OUT OF YOUR ACCOUNT!

Phone number authentication is going away, here's a quick guide on how to add Microsoft Authenticator to your account.

1 DOWNLOAD THE APP

Scan the iPhone or Android QR code to download the Microsoft Authenticator app

iPhone

Android

SECURITY INFO

mysignins.microsoft.com/security-info

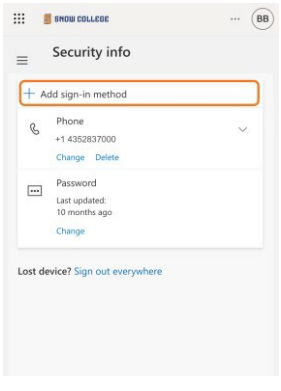

2 OPEN YOUR ACCOUNT SETTINGS

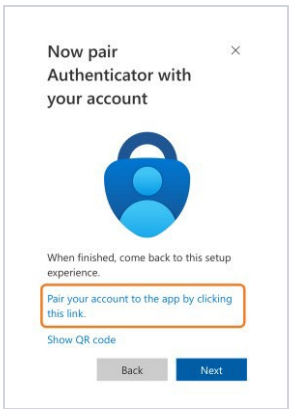

Log in to your account settings

3 ADD SIGN-IN METHOD

Select Add sign-in method → Microsoft Authenticator and follow the prompts

Then choose Pair your account to the app and enter the 2-digit code

4 CHANGE DEFAULT METHOD AND DELETE PHONE METHOD

Select Change to make your default method the Microsoft Authenticator app, and delete the phone number method

Top 5 cybersecurity threats to watch right now

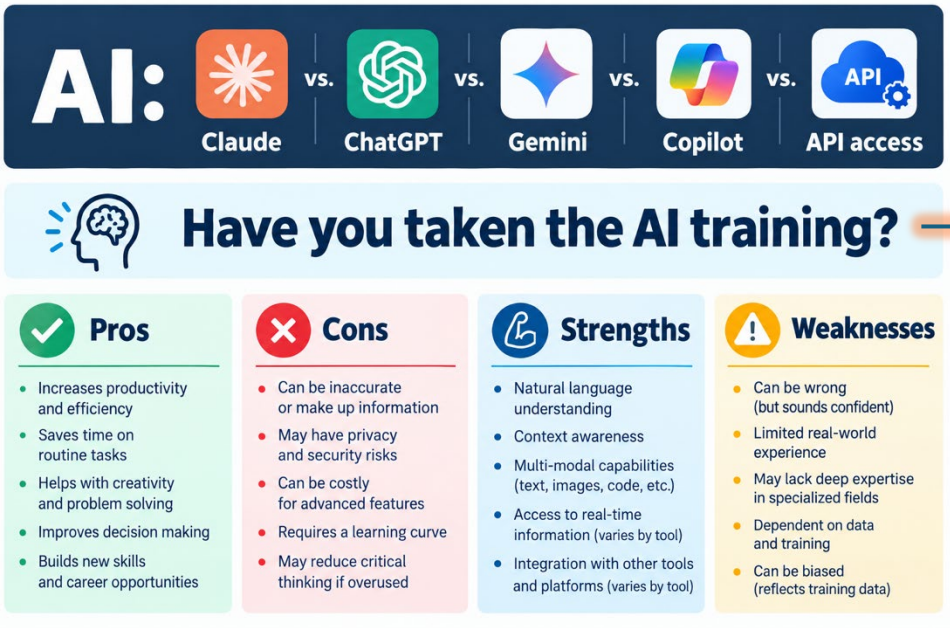

1. Ransomware and double-extortion attacks
    a. Watch for unusual file encryption activity and unexpected large outbound data transfers.
2. MFA bypass and session-token theft
    a. Attackers are finding ways around traditional multifactor authentication. Rather than stealing just a password, they steal an authenticated session token.
3. Social engineering targeting departments
    a. Attackers are increasingly impersonating IT personnel and contacting employees directly.
4. AI-powered phishing and impersonation
    a. Employees receiving urgent requests to reset passwords, purchase gift cards, change banking information, or approve unexpected MFA prompts.
5. Business email compromise
    a. Attackers compromise legitimate email accounts and use them to request money, sensitive information, or changes to vendor payment instructions.

"GPT to Plugins conversion" generally refers to taking a custom GPT or an AI-powered integration and converting it into a plugin or app that can connect ChatGPT to external services.

Here's the difference:

- GPT: A customized version of ChatGPT designed for a particular purpose, with its own instructions, knowledge, and capabilities.
- Plugin: An integration that allows ChatGPT to interact with another application or service, such as retrieving information, accessing data, or performing actions.
- Conversion: Adapting the GPT's functionality so it can work through an external integration.
